

Project Information Sheet

Implementing Fundtrac at Partner Organisations Worldwide

A project of  eed

CRAFOD was founded in 2004 in the Lower Congo region of Kimpese in the Democratic Republic of the Congo. In the area between Matadi and the region of Mbanza-Ngungu, CRAFOD took over from the European Union as the central supplier of development aid to the rural area.

Core projects currently mainly include integrated development initiatives in the county encompassing economic development, social advancement and employment-oriented education actions as well as HIV-prevention and malaria treatment activities.

CRAFOD decided to use the Fundtrac® software solution to manage its projects financed from international donor agencies. CIWI GmbH installed Fundtrac® on CRAFOD's local network and trained its employees. In July 2005 CIWI GmbH installed a satellite-based Internet access system to allow CRAFOD's employees to manage their funds remotely using state-of-the-art technologies, an exception in the entire Kimpese region.

Project Objectives

- Implementation of Fundtrac® as the main project accounting and financial bookkeeping solution
- Improvement of the internal and external reporting standards (ie. project transparency, audits of donor organizations etc.)
- Training of employees
- Installation of a satellite-based Internet access system and implementation of remote access to project data

Project Scope

- 1.9 million € from EED, BMZ and EU resources
- 5-year project
